2020												3.28%	3.28%

An unpleasant month. Commodities was the main culprit, with the timing of our direction and sizing both working out poorly. Agriculturals was an outsized detractor, with oil and gold also causing losses. A full-sized short position in bonds was the only significant offset, alongside a few modest gains in factor equities. Portfolio risk was substantially cut around mid-month and the cash allocation remained high through month-end.
